

OPTENET WEBSECURE™

COMPLETE PROTECTION FOR A WEB 2.0 WORLD

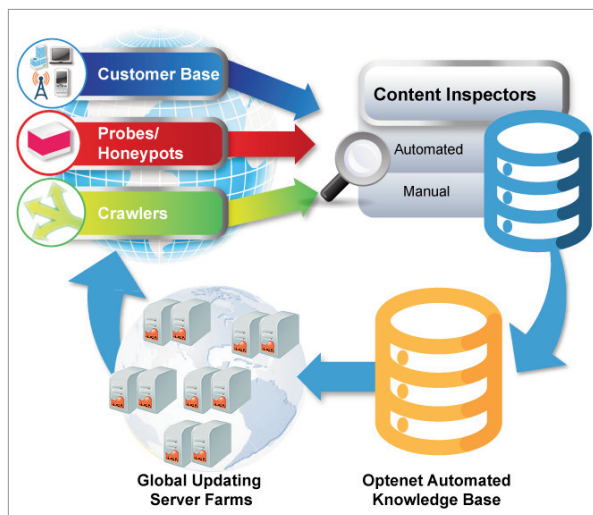

HIGHEST PERFORMANCE AND ACCURACY
 ONE-STEP UPGRADE TO ADD ANTISPAM
 DYNAMIC CLASSIFICATION AND BLOCKING
 INDUSTRY LEADING MALWARE AND
 ANTIVIRUS PROTECTION

Optenet WebSecure™ provides enterprises a cost-effective solution for protecting users from malware and access to illegal or inappropriate web pages. Based on Optenet's dynamic, real-time content filtering technology, Optenet WebSecure™ is unique in its ability to both allow appropriate content and block inappropriate content contained in the same page. Only Optenet WebSecure™ can provide IT managers the policy setting and control to ensure their end customers are protected and secured from unsuitable or malicious content without impacting their web browsing experience.

OPTENET'S TECHNOLOGY ADVANTAGE

At the heart of every Optenet solution is the **Carrier Class Optenet Transparent Traffic Analyzer (CCOTTA™)** which provides real-time processing and coordination of all network traffic. Whether configured in bridge, proxy or router mode, CCOTTA™ works in the background, routing the traffic to the proper security service (antispam, antivirus, web filter, etc.) per the defined security policies. By sending only the required traffic to the designated security service, CCOTTA™ provides the basis for Optenet's unsurpassed, industry-leading performance and scalability.

Critical in ensuring accurate blocking in the dynamic world of Web 2.0 is the ability to categorize traffic in real time. Optenet's **Global Intelligence Acquisition Network for Threats (Optenet GIANT™)** is constantly receiving input from Internet sources around the world, and pushing these updates out to every Optenet solution – ensuring that new threats and menaces are properly blocked.

Utilizing **Optenet GIANT™** as a key data source, Optenet's **Multicontent Inspection and Dynamic Analysis System (Optenet MIDAS™)** inspects video, text and images and properly categorizes the data in real time.

Optenet WebSecure™

CCOTTA™

- Web Security
- Malware Protection
- Application Management
- Real-Time Reporting Tools

Dynamic and proactive protection against Web 2.0 threats

Web 2.0 and the proliferation of dynamic content provide new avenues for today's advanced hackers to harm or attack precious electronic assets. Using the most advanced and comprehensive set of real-time content analysis techniques, along with industry leading malware signatures, Optenet WebSecure™ offers companies the most effective real-time protections against harmful attacks.

Defend your network with the best malware protection engine

Optenet WebSecure™ incorporates the Kaspersky Lab antivirus detection system, guaranteeing detection of malicious HTML code. Kaspersky technology provides superior detection of viruses, trojans, and worms, as well as spyware, adware, rootkits and all types of malware.

Faster response time to security issues and optimal use of bandwidth

Optenet WebSecure™ comes complete with Optenet's reporting module. By providing a comprehensive real time view of web traffic, IT administrators gain 100% visibility over network activity. External threats, abnormal internal bandwidth usage or violations of company Internet policy are graphically depicted and/or alerts set so that IT administrators can take swift corrective action.

More efficient and effective use of IT resources

Optenet WebSecure™'s management GUI ensures that IT administrators can simply and effectively configure security policies. By having all the security services accessible on an integrated console, the burden and time spent by precious IT staff is greatly reduced. In addition, by having a single policy engine across all security services, the likelihood of inadvertent configuration errors across multiple systems is eliminated.
